

System Integration Technical Developer

We are seeking a System Integration Technical Developer to become an integral part of our development team! You will build and maintain processes, utilities, and web services for importing and exporting large volumes of data for multiple integrated partners.

The System Integration Developer will implement extensible processes for applying business logic to data received via file transfers, web services, and other internal processes, and to data being exported from internal processes. The developer will work closely with product and technology owners to design and implement APIs, SDKs, and Single Sign On solutions for interfacing with new and existing partner systems.

The ideal candidate should have a solid working knowledge of Core Java, Java Spring, and Spring REST API development. Experience in a microservice/SOA environment in AWS is a huge plus. Experience with Adeptia B2B platform also a plus.

Responsibilities:

- Assist with design and implementation of low level and middle tier web services, processes, and utilities, to provide an extensible data exchange platform
- Assist with deploying, monitoring, and troubleshooting system integration processes
- Ensure that security and data access restrictions are enforced at every level
- Research new technologies and develop proofs of concept

Qualifications:

- 4+ years of batch, API, and web service development using Spring
- 6+ years of Java web development
- Demonstrated ability to develop horizontally scalable systems
- Understanding of REST principles and API patterns
- Strong understanding of secure coding techniques, particularly in the areas of online payments and healthcare privacy
- Ability to work efficiently and reliably with minimal oversight
- Ability to manage multiple priorities and assist with various projects simultaneously

Salary Range: \$75,000-\$90,000 plus benefits
